Progression in the tecneques in paramotor flights and initiate active piloting.

In this course Ramon will first find your level and from that moment we will head towards the flight techniques, use of the machine and other areal questions.

Removing doubts and bad habits, with the active pilot you start with what we call active pilot your paraglider, by which basic acrobatic techiques you will learn to control your wing and the necessary touch to pilot it in turbulant conditions, in a fun and exciting way.

Come to the BAHIA to have a great time and learn with one of the greatest pilots in the history of Powered Paragliding.

### **Summary of the course:**

The Aim of this course is; throughout training basic acrobatic techiques make the student learn to control the wings movement, and so, Little by Little the student will have the necessary touch in every possible risky condition, both in turbulent conditions just to increase your piloting level periodically training these tricks.

On the paramotor flight, we manage using the throttle, control or stop unwanted movements as well as accompany in dynamic maneuvers emphasizing the energy using the power of the engine.

It's also important to specify what we call conducted turns, as engine torque and propeller help us or impede us on our turn depending on the way we're turning. In this course we will be able to experiment the feeling of piloting our glider where we want to avoiding to slide or skid.

Some other maneuvers we can higlight are the wingovers the dolhpins, spins and others. The course takes place over water, specifcly at the lake of Bornos, where the company "BORNOS ACTIVO" who give us the secure boat support and tow lifts, as well as classrooms for our theoretical and video projection classes, they also dispose of camping, restaurant and cottages.

The length of the course is 3 days plus 1 in case of bad weather, depeding of the their level the participants will do a tándem flight with Ramon Morillas where they will go over some of the excercises. Besides the excercises with the motor, there is the possiblity of training excercises with a higher level of technique by towed flights.
